Product Specification

1. General Description

The LP156WF4 is a Color Active Matrix Liquid Crystal Display with an integral LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. This TFT-LCD has 15.6 inches diagonally measured active display area with FHD resolution (1920 horizontal by 1080 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors. The LP156WF4 has been designed to apply the interface method that enables low power, high speed, low EMI. The LP156WF4 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP156WF4 characteristics provide an excellent flat display for office automation products such as Notebook PC.

General Features

Active Screen Size	15.6 inches diagonal
Outline Dimension	359.5(H, typ.) × 224.1(V, typ.) × 3.4(D,max) [mm] (with Bracket & PCB Board)
Pixel Pitch	0.17925 mm x 0.17925 mm
Pixel Format	1920 horiz. By 1080 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	300 cd/m ² (Typ.5 point)
Power Consumption	Total 7.0 W(Typ.) Logic : 1.4W (Typ.@ Mosaic), B/L : 5.6W (Typ.@VLED12V)
Weight	330g (Max.) / 320g (Typ.)
Display Operating Mode	Normally Black
Surface Treatment	Anti glare treatment (3H) of the front Polarizer
RoHS Compliance	Yes
BFR / PVC / As Free	Yes for all

Product Specification

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Values		Units	Notes
		Min	Max		
Power Input Voltage	VCC	-0.3	4.0	Vdc	at 25 ± 5°C
Operating Temperature	TOP	0	50	°C	1
Storage Temperature	HST	-20	60	°C	1
Operating Ambient Humidity	HOP	10	90	%RH	1
Storage Humidity	HST	10	90	%RH	1

Note : 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39°C Max, and no condensation of water.

Note : 2. Storage Condition is guaranteed under packing condition.

Product Specification

3. Electrical Specifications

3-1. Electrical Characteristics

The LP156WF4 requires two power inputs. The first logic is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second backlight is the input about LED BL with LED Driver.

Table 2. ELECTRICAL CHARACTERISTICS

Parameter	Symbol	Values			Unit	Notes
		Min	Typ	Max		
LOGIC :						
Power Supply Input Voltage	V _{CC}	3.0	3.3	3.6	V	1
Power Supply Input Current Mosaic	I _{CC}	-	430	495	mA	2
Power Consumption	P _{CC}	-	1.4	1.6	W	2
Power Supply Inrush Current	I _{CC_P}	-	-	1500	mA	3
LVDS Impedance	Z _{LVDS}	90	100	110	Ω	4
BACKLIGHT : (with LED Driver)						
LED Power Input Voltage	V _{LED}	7.0	12.0	21.0	V	5
LED Power Input Current	I _{LED}	-	470	520	mA	6
LED Power Consumption	P _{LED}	-	5.6	6.2	W	6
LED Power Inrush Current	I _{LED_P}	-	-	1500	mA	7
PWM Duty Ratio		5	-	100	%	8
PWM Jitter	-	0	-	0.2	%	9
PWM Impedance	Z _{PWM}	20	40	60	kΩ	
PWM Frequency	F _{PWM}	200	-	1000	Hz	10
PWM High Level Voltage	V _{PWM_H}	3.0	-	5.3	V	
PWM Low Level Voltage	V _{PWM_L}	0	-	0.3	V	
LED_EN Impedance	Z _{PWM}	20	40	60	kΩ	
LED_EN High Voltage	V _{LED_EN_H}	3.0	-	5.3	V	
LED_EN Low Voltage	V _{LED_EN_L}	0	-	0.3	V	
Life Time		12,000	-	-	Hrs	11

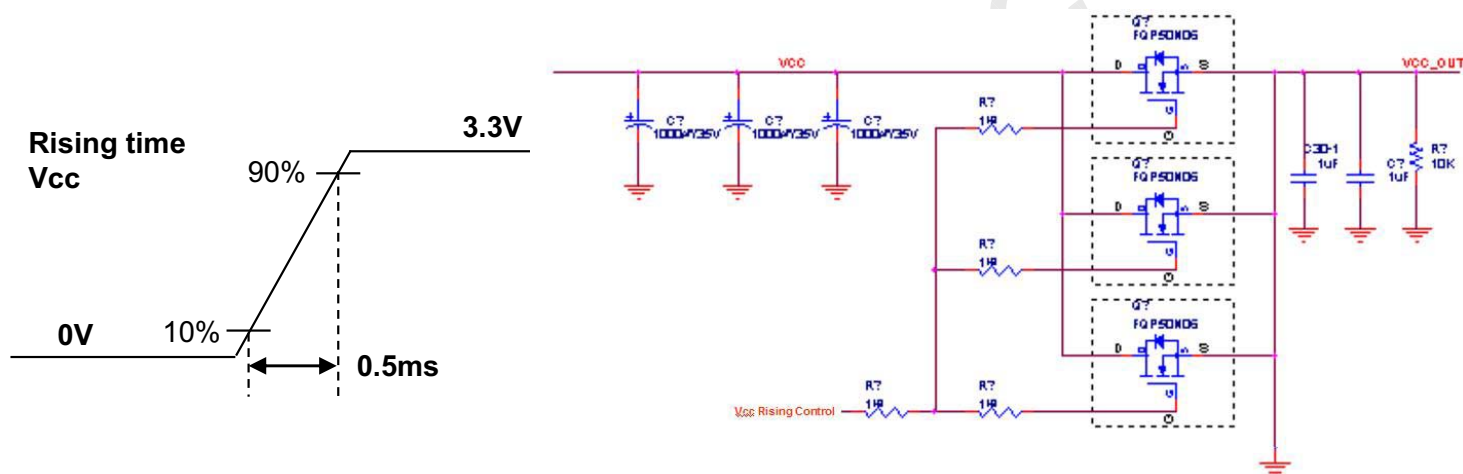

Product Specification

Note)

1. The measuring position is the connector of LCM and the test conditions are under 25 °C , $f_v = 60\text{Hz}$, Black pattern.
2. The specified I_{cc} current and power consumption are under the $V_{cc} = 3.3\text{V}$, 25 °C , $f_v = 60\text{Hz}$ condition and Mosaic pattern.

3. This Spec. is the max load condition for the cable impedance designing.
4. The below figures are the measuring V_{cc} condition and the V_{cc} control block LGD used.
The V_{cc} condition is same as the minimum of T1 at Power on sequence.

5. This impedance value is needed for proper display and measured from LVDS Tx to the mating connector.
6. The measuring position is the connector of LCM and the test conditions are under 25 °C .
7. The current and power consumption with LED Driver are under the $V_{led} = 12.0\text{V}$, 25 °C , Dimming of Max luminance and White pattern with the normal frame frequency operated(60Hz).
8. The below figures are the measuring V_{led} condition and the V_{led} control block LGD used.
 V_{LED} control block is same with V_{cc} control block.

9. The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue.
10. If Jitter of PWM is bigger than maximum, it may induce flickering.
11. This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.
12. The life time is determined as the time at which brightness of LCD is 50% compare to that of minimum value specified in table 7. under general user condition.

Product Specification

3-2. Interface Connections

This LCD employs two interface connections, a 40 pin connector used for the module electronics interface and the other connector used for the integral backlight system.

Table 3. MODULE CONNECTOR PIN CONFIGURATION (CN1)

Pin	Symbol	Description	Notes
1	NC	No Connection	[Interface Chip] 1. LCD : SiW, SW0636A (LCD Controller) Including LVDS Receiver. 2. System : SiW LVDSRx or equivalent * Pin to Pin compatible with LVDS

Product Specification

3-4. Signal Timing Specifications

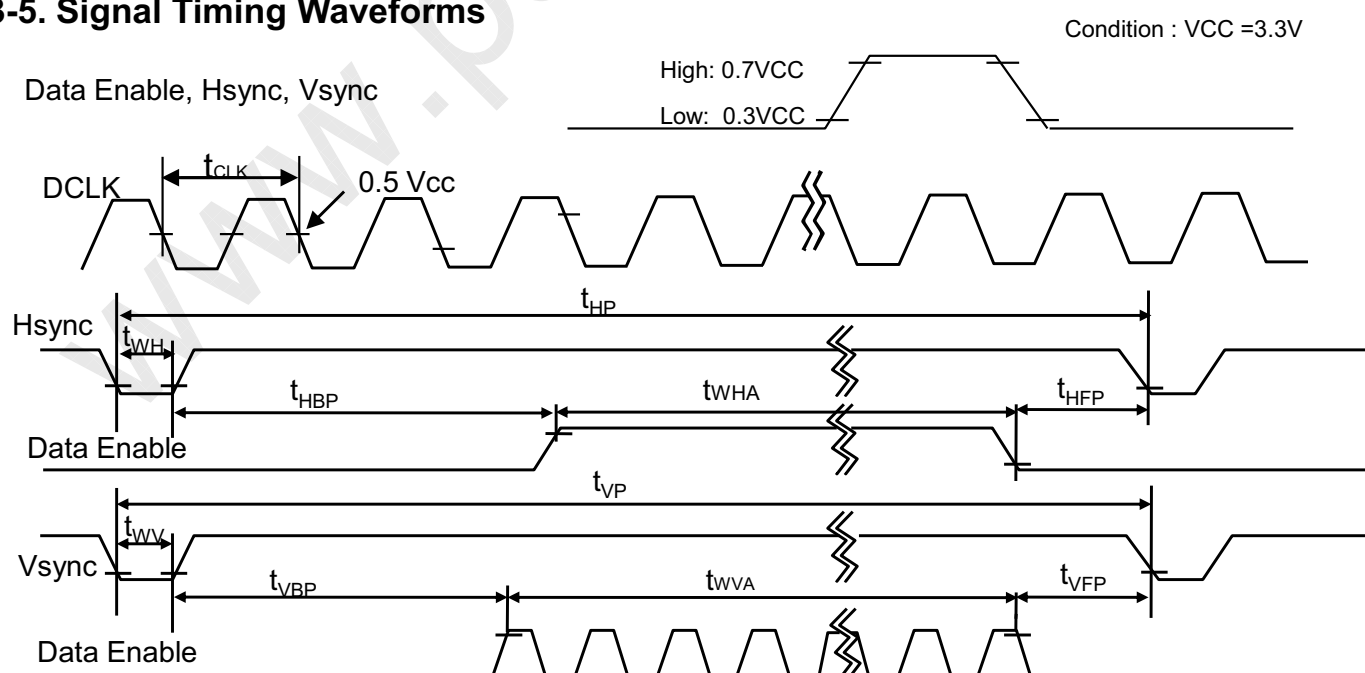

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications and specifications of LVDS Tx/Rx for its proper operation.

Table 6. TIMING TABLE

ITEM	Symbol		Min	Typ	Max	Unit	Note
DCLK	Frequency	f_{CLK}	68.6	74.5	77.3	MHz	LVDS 2 port (60Hz)
Hsync	Period	t_{HP}	1032	1104	1138	tCLK	
	Width	t_{WH}	32	36	36		
	Width-Active	t_{WHA}	960	960	960		
Vsync	Period	t_{VP}	1108	1124	1132	tHP	
	Width	t_{WV}	5	5	5		
	Width-Active	t_{WVA}	1080	1080	1080		
Data Enable	Horizontal back porch	t_{HBP}	24	84	90	tCLK	
	Horizontal front porch	t_{HFP}	16	24	52		
	Vertical back porch	t_{VBP}	20	36	38	tHP	
	Vertical front porch	t_{VFP}	3	3	9		

Appendix) all reliabilities are specified for timing specification based on refresh rate of 60Hz. However, LP156WF4 has a good actual performance even at lower refresh rate (e.g. 40Hz or 50Hz) for power saving mode, whereas LP156WF4 is secured only for function under lower refresh rate. **60Hz at Normal mode, 50Hz, 40Hz at Power save mode. Don't care Flicker level (power save mode).**

3-5. Signal Timing Waveforms

Product Specification
3-6. Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Table 5. COLOR DATA REFERENCE

Color		Input Color Data																	
		RED						GREEN						BLUE					
		MSB			LSB			MSB			LSB			MSB			LSB		
		R 5	R 4	R 3	R 2	R 1	R 0	G 5	G 4	G 3	G 2	G 1	G 0	B 5	B 4	B 3	B 2	B 1	B 0

T ₆	200	-	-	ms	T ₁₃	0	-	5000	ms
T ₇	3	-	10	ms					

Note)

1. Do not insert the mating cable when system turn on.
2. Valid Data have to meet "3-3. LVDS Signal Timing Specifications"
3. LVDS, LED_EN and PWM need to be on pull-down condition on invalid status.
4. LGD recommend the rising sequence of VLED after the Vcc and valid status of LVDS turn on.

Product Specification

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and Θ equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

FIG. 1 Optical Characteristic Measurement Equipment and Method

Table 9. OPTICAL CHARACTERISTICS

LP156WF4
Liquid Crystal Display

Product Specification

Note)

1. Contrast Ratio(CR) is defined mathematically as

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the average of 5 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 1.

$$\text{LWH} = \text{Average}(\text{L1}, \text{L2}, \dots \text{L5})$$

3. The variation in surface luminance , The panel total variation (δ WHITE) is determined by measuring LN at each test position 1 through 13 and then defined as following numerical formula.
For more information see FIG 2.

$$\delta \text{ WHITE} = \text{Maximum}(\text{L1}, \text{L2}, \dots \text{L13}) / \text{Minimum}(\text{L1}, \text{L2}, \dots \text{L13})$$

4. Response time is the time required for the display to transition from white to black (rise time, TrR) and from black to white(Decay Time, TrD). For additional information see FIG 3.
5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

6. Gray scale specification

* fV = 60Hz

Gray Level	Luminance [%] (Typ)
L0	0.13
L7	0.93
L15	4.53

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaked with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) When handling the LCD module, it needs to be handled with care not to give mechanical stress to the PCB and Mounting Hole area."

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)
And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
